Here the steps you need future scientists:
(If future technology and macroengineering has been developed by your timeline):

1. Find Julian Tyler Bassman at 12:00:00 MIDNIGHT Eastern Standard Time at 1900 Hamilton Street Philadelphia PA, Apt. 306. Don't worry, privacy laws protect people and I have given you permission to do this.
2. If you send back human teleportation, take him to a lab or medical research facility in my time. Make sure everything from this timeline and future governments is completed and approved and either flown under the radar, or rescanned by our current government, that wouldn't get me or anyone else in trouble
3. Complete mission from deep_time_travel_archive2 from REDAME deep_time_travel_archive1
4. Robots or any government notes from 20,005 AD it is helpful
5. Please note that if that technology is ever invented complete my mission from the respitories
6. Do a do-over GIS scan (i. e., do a scan of memory closure, CBT, and more), and do this secretly. And there are invasion of privacy laws so either send back a private script of what I need to do differently if there are things I can do and things I can't regarding my mission and use my mission to scan for people
7. There are non-disclosure agreements just like if I mentioned everything and the GIS can be scanned but results are made to protect personal privacy rights. It couldn't reveal any information I didn't already know
8. Do this secretly and within six hours. If I somehow fail the mission, I will order a breakfast burrito, watch Toy Story 4, and just live a normal happy life finding a way to live with alternatives
9. Do not do this without ensuring complete safety
